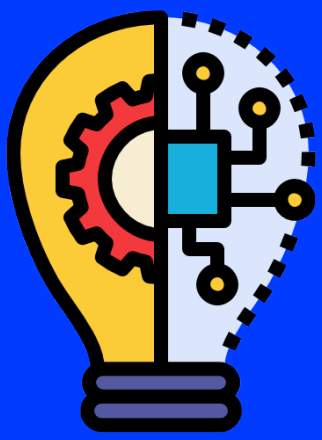
INNOVATION TRACK_

< EIP SLIDE DECK />



INNOVATION TRACK

Let's create a reference slide deck that will provide an overview of your project to anyone.

This document will evolve, and each stage of the innovation track and the EIP will allow you to complete and enrich it.

This document will also be used for the validation of your project by the jury composed of the general directors and program managers of Epitech.

The final document should present 5 parts:

- ✓ title ;
- ✓ idea ;
- ✓ project ;
- ✓ competition, costs & revenues, testimonials, mock-up ;
- ✓ information.

To explain and illustrate each part, you're provided with some slides extracted from pitch decks of famous tech companies, such as Dropbox, Airbnb, Uber, YouTube, Snapchat and Facebook.

Title

Each slide of your presentation has a role to play.

The importance of the first slide is often overlooked, and it doesn't receive enough attention. However, this slide:

- ✓ engages your audience from the very first second ;
- ✓ sparks curiosity and makes them eager to know more ;
- ✓ remains visible for a long time as it's displayed during the pitch preparation phase.

Some details should NOT be included on the first slide, such as your presentation (class / year of study / names of group members / city) or the track and EIP presentations.

Although these are important pieces of information, they don't capture the audience's interest at the beginning of the presentation.

To retain these details, which we've identified as important, we'll reposition them at the end of the presentation in ”Part 5: Information,” because once convinced, the audience truly wants to know who they're dealing with and understand the project's context.

The first slide of a deck is often the most challenging to write because you're trying to summarize a complex idea in just a few words. It's simpler to write it last, so don't get stuck on this part.

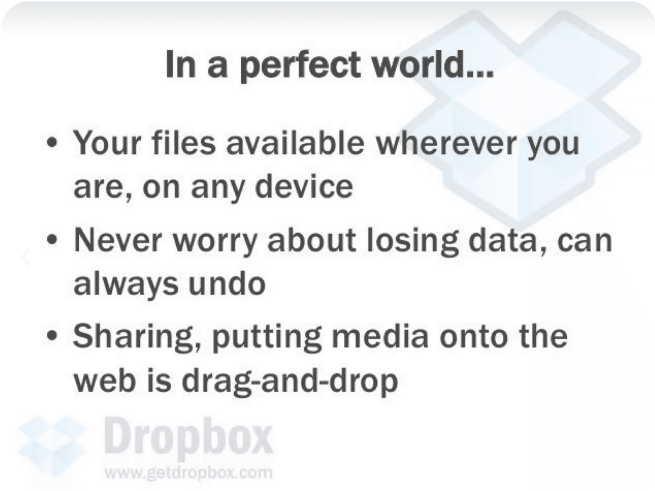
Idea

There are different ways to present a project idea, you will use the one that seems most suitable to you to write this part.

The format is free, you are not necessarily required, for example, to use 4 slides for the storytelling part.

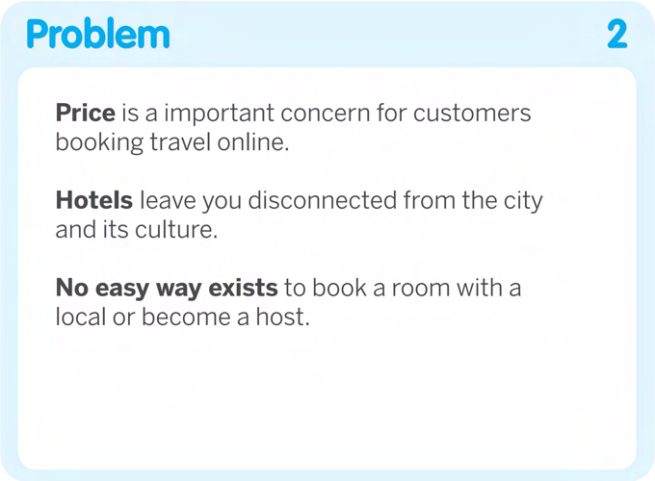
Solution 1: Storytelling

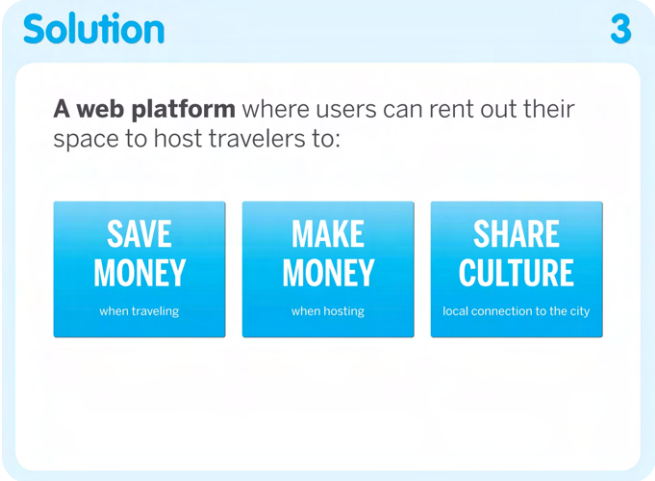
A successful storytelling is **coherent**, **clear**, **credible**, **concrete** and **concise**.

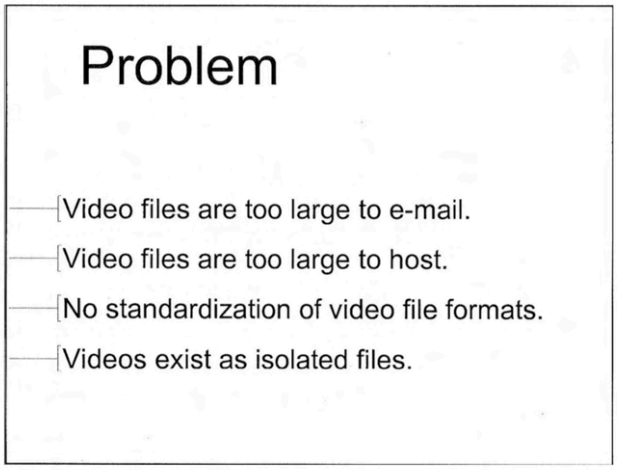


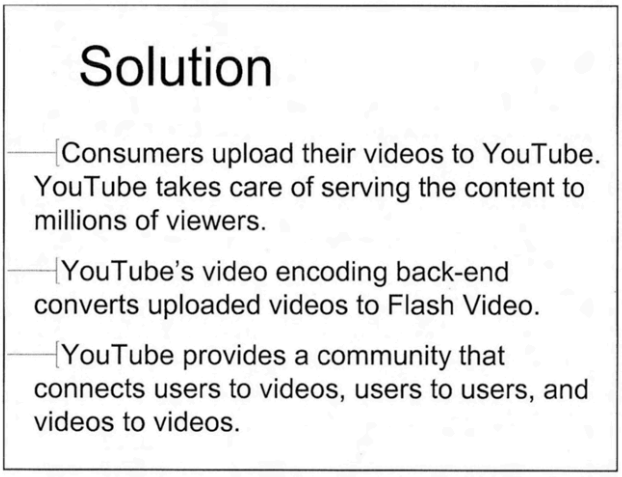
Solution 2 : Problem & Solution

If we can understand the opportunity you're seizing through the two slides ”Problem/Solution”, then it means you've successfully synthesized the ”WHY” of your project.









During the first week of the innovation track, you will have two opportunities to present project ideas to a jury and receive feedback on your slide decks during pitch activities. It is a good way to work on Part 2 of your slide deck

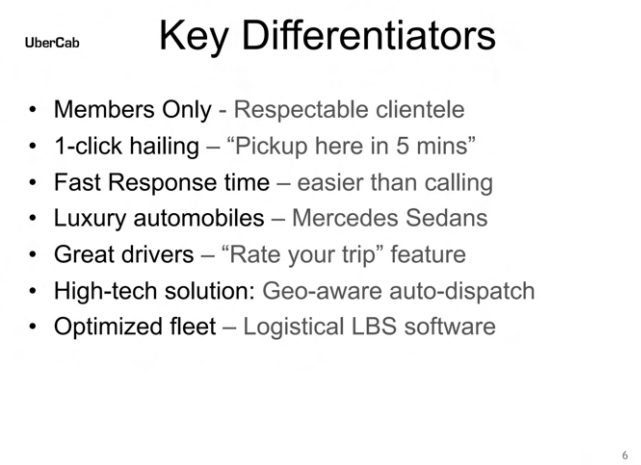
Project

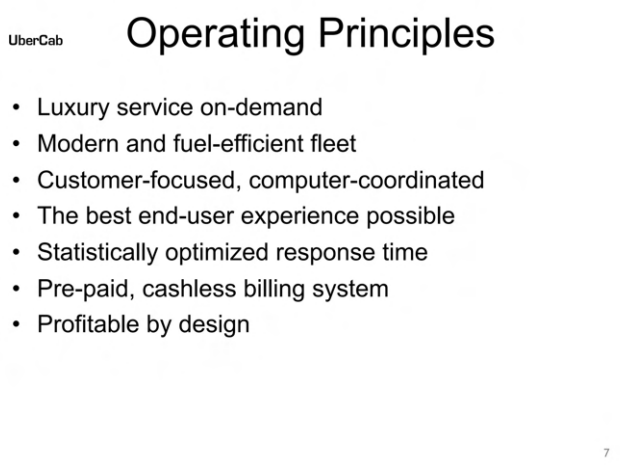
Key features

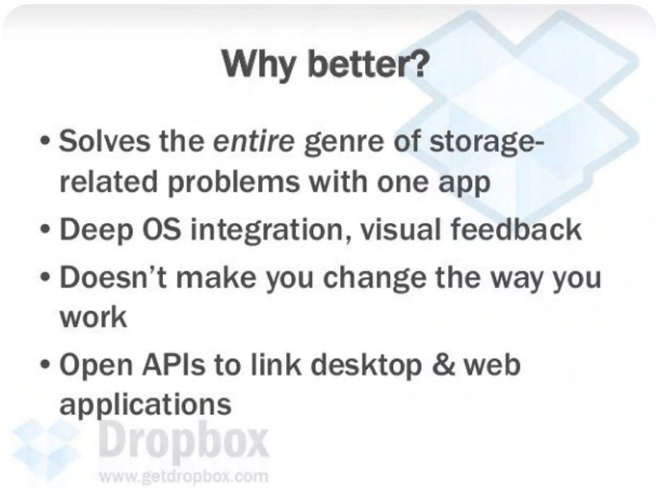
If you can highlight the main and important features of your product, then it means you know how to present your product.

By listing the standout features of your project, you make your project unique and innovative.

By describing the role of each key feature, you anticipate questions and enable a better understanding of the context.

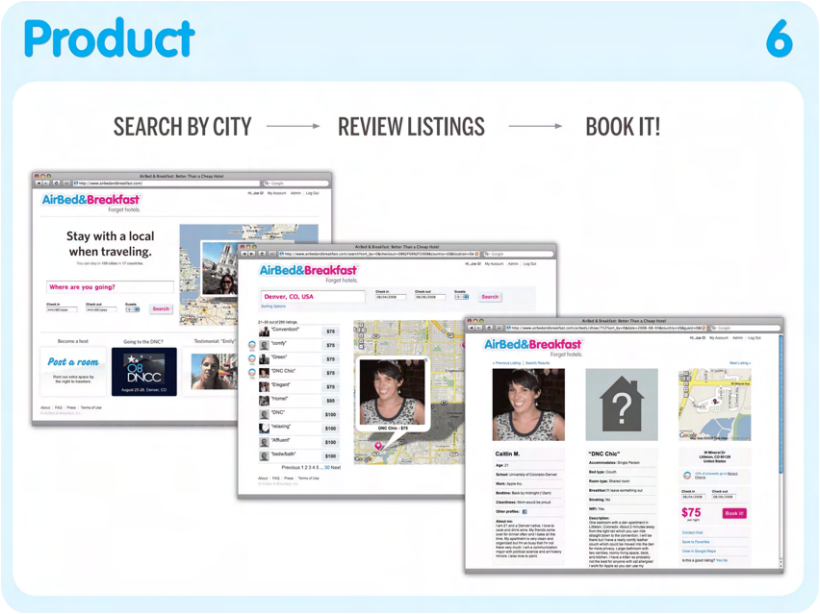




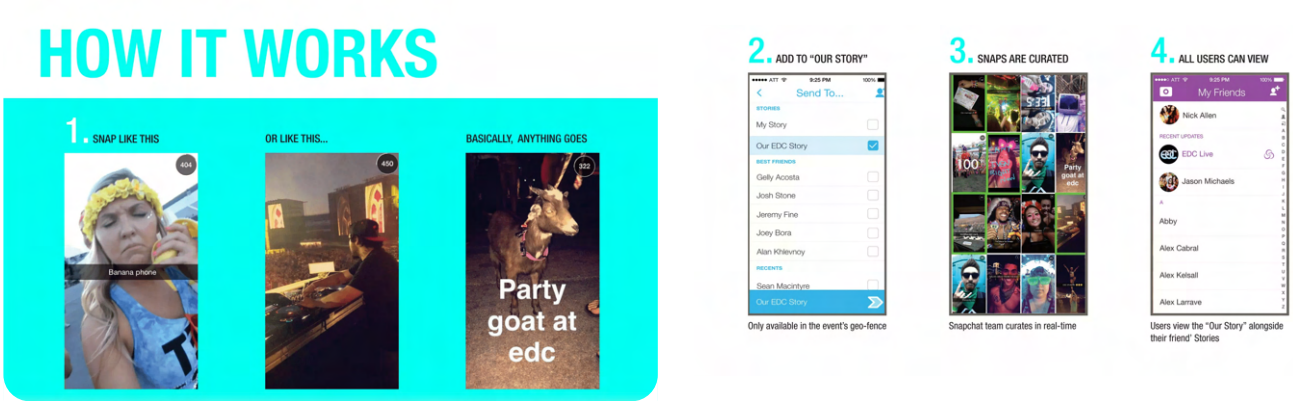


How it works

If you can explain how it works, then it means that you have design your product.



This part presents how the user will use your solution and provides concrete evidence of the feasibility of your project

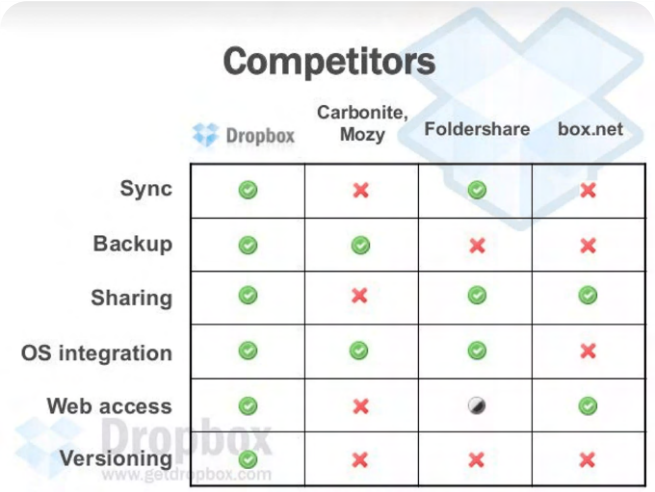


At the end of the first week of the innovation track, after selecting your project, you will work with your project group on part 3. It is crucial to ensure that each member of your group shares the same goals and vision for the project

Competition / Business / Testimonials / Mock-up

Competition

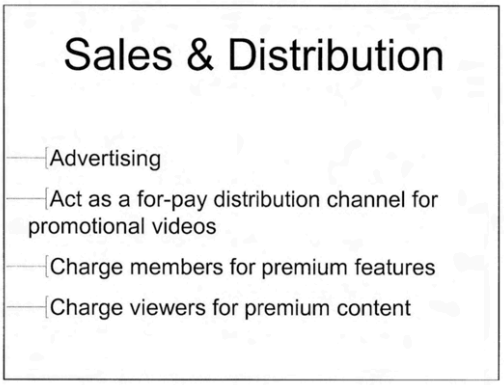
If you can produce a comparative table showcasing your product's features against your competitors, It means that you have identified the strengths of your product compared to your competitors.

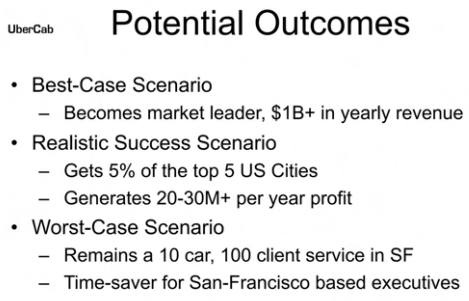


Building on the workshop *Competition* during the second week of the innovation track, you will work on the competitor map, which will make it easier for you to establish this comparative table.

Revenue streams

Establishing your potential revenue streams means that you are starting to know your market.





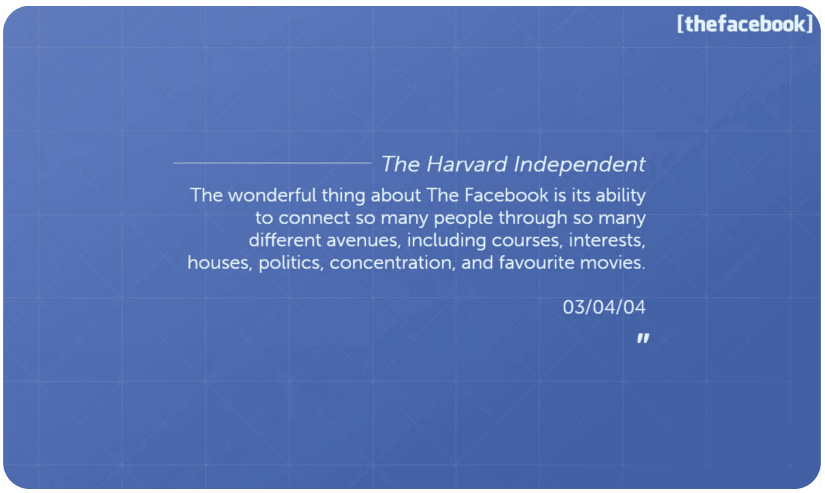
Costs

If you can identify your costs, it means you understand that what may seem free at first glance has a cost in the context of your project.

Building on the the workshop *Costs & Revenues* during the second week of the innovation track, you will work with tools, which will make it easier for you to establish your cost and revenue streams.

Testimonials

If you have identified and engaged with your future users through interviews, it means you already know your early adopters and your sponsors.



Building on the workshop *Persona* during the second week of the innovation track, you will work on a fictional character created to represent a user type, which will make it easier for you to establish real users.

Mock-up

If you can present a demonstration of your product, it means that your product exists and is not just a concept.

It is desirable to create a video presenting the prototype. A video is an asynchronous format that helps avoid bugs in live presentations.

Based on the work you did on your prototype during the second week of the innovation track, you will present the key elements that will vary depending on the objective of your project: for a Solution project, a demo in the form of a Figma prototype; for an Entrepreneurship project, an advanced business model; and for a Tech project, a presentation of the project's architecture and technical pain points.

Information

Team

If the people who listened to you have a strong desire to know more about you and your team at the end of this presentation, it means you have accomplished your mission.

Contact Us

If the people who listened to you have a strong desire to contact you at the end of this presentation, it means you have accomplished your mission.
